

PRE-CONFIGURED DATA MANAGEMENT SOLUTIONS

Deploy secure, scalable data governance & management in one day to accelerate Transformation, AI and Regulatory Compliance.

Business Challenge

Effective data governance & management are the foundation of any digitally enabled and/or heavily regulated business.

Yet building these capabilities is often expensive, time-consuming and places a significant burden on already stretched business and technology teams.

Our solution

- ✓ Out of the box, pre-configured and imported into your data governance tool within 1 day
- ✓ Available in the market leading technologies, including Purview, Informatica and Collibra.
- ✓ Reduces delivery by 1-2 years for large transformation projects.
- ✓ Coverage across key regulated industries such as Banking, Superannuation and Critical Infrastructure.
- ✓ One-off investment cost

Built for measurable business value

AJEKA Data Management Solutions rapidly identify opportunities to improve data quality, governance and trust, enabling better business decisions, lower risk, faster project delivery and greater value from AI, analytics, regulatory reporting and digital transformation..

Industry leading Data Models

Business-friendly data models that provide stakeholders with core concepts, definitions and relationships.

Conceptual Data Model & Glossary of Terms:

- ↳ Data Domains (Top Level)
 - ↳ Subdomains (Level 2-3)
 - ↳ Business Terms (Level 4).

Name	Type	Description

Conceptual Data Model as downloaded into Informatica for Retail Banking

Case study – Large Regional Bank

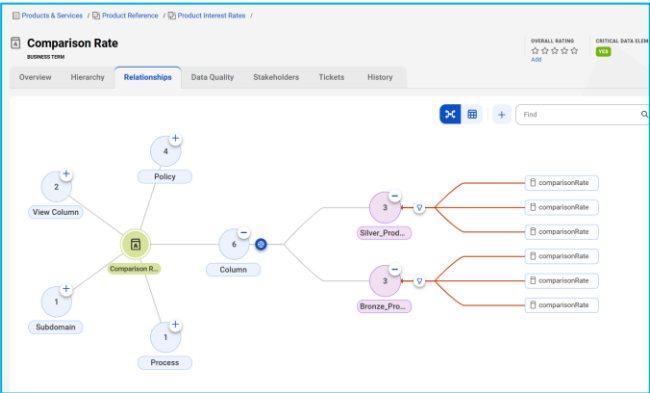

One of our clients purchased our banking industry Data Management solution as part of their data governance implementation and brought forward their data roadmap by 1+ year, with reduced effort and costs in establishing their data governance foundation.

This allowed them to not only gain value from their investment much sooner but enabled transformation activities to start earlier.

Aligning business and technical context

Establish relationships between:

- Business terms
- Your data (e.g. a column in a table)
- Business processes
- Data policies
- Projects
- AI models

Lineage from conceptual data to business process, policy and through to physical data (tables and attributes).

Ready to accelerate your data and AI journey?
